## WebID donates again to children in need

\_ We were recently reminded of just how many children are living in poverty. That is why we at WebID are excited to continue our charitable work and, with the help of a company donation to **Deutsches Kinderhilfswerk e.V.** and **Plan International e.V.**, put a smile on the faces of financially disadvantaged children.

This year we once again wish Deutsches Kinderhilfswerk e.V. and Plan International e.V. **great success and many donations.** For information about donations, take a look at the websites of each of the organisations. \_

## WebID AI: Fully automatic personal identification based upon artificial intelligence

[www.it-finanzmagazin.de](http://www.it-finanzmagazin.de), 11 March 2019

\_ **Artificial Intelligence (AI) is on everyone's lips. In many industries and sectors, it has become a key topic.** But well-developed solutions and viable business models are not always easy to find. WebID now offers the "WebID AI" service which is suitable for various industries, such as **e-commerce and payment, financial services, age checks, comprehensive KYC processes and fraud prevention.** "It's all about speed, reliability and security", says Frank S. Jorga, Co-CEO of WebID. \_

## Fintechs: competition boosts innovation

[www.cash-online.de](http://www.cash-online.de), 15 March 2019, guest contribution by Frank S. Jorga

→ [Fintechs: competition boosts innovation](#)

– **Fintechs owe their success in part to the global financial crisis of 2008/2009.** That was when many people lost their previously unshakeable trust in traditional banks. More frequently fintechs cooperate with traditional companies. They benefit from each other. **“Of course, it doesn’t all happen on its own - it only happens as a result of rising competition”**, explains Frank S. Jorga. Read in Frank S. Jorga’s guest contribution about how fintechs have developed and have established themselves since the financial crisis. –

## E-identity: open an account just by clicking

[www.dw.com](http://www.dw.com), 28 March 2019

– Online businesses are booming like never before. But they are often limited where personal verification is required preliminary to be carried out by a trained employee. Not to mention long waiting times at banks or insurance companies. **Video identification processes** now offer **secure, fast and uncomplicated digital contract signing.** **Companies show great deal of interest.** WebID is one of Germany’s major providers and is a pioneer of this technology. Read the article to discover the meaning of it. –

## The ID-recognition of the future: WebID has big plans with its solutions for online identification Eurowings magazine, March/April 2019 issue

The video identification process for digital recognition of customers saves countless people a time-consuming visit at the post office or bank. The innovative idea was brought to life by WebID and its CEO Frank Jorga, who have dedicated themselves to providing secure proof of identity - whether opening a customer account or signing a contract.

Currently, up to 10,000 customers per day are being verified by means of video identification. But WebID is definitely not finished yet. Because the digital pioneer wants to make identity cards completely redundant. As such, automatic recognition of persons in all aspects of everyday life is the next step of WebID's vision.

The company already uses artificial intelligence (AI) to make processes more efficient. WebID's AI product can now be used globally and in combination with established identification processes or as a standalone solution for identity checks. WebID intends to expand into the USA. Whether DKB, Daimler, Klarna or Barclaycard: major corporate clients and an impressive market share speak volumes about the company's ambition.

## Further identification documents added to the WebID country list

**WebID has expanded their country list of identification documents accepted in video calls to include almost 100 new national and international documents.** These include identification documents for countries such as Belgium, Brazil and Japan. At the same time, a few other identification documents have been removed from the list because they no longer provide sufficient security features and would therefore be unsecure. Should you have any questions about the updated country list, send us a message at [sales@webid-solutions.de](mailto:sales@webid-solutions.de).
